**Question of the Day: Can I get COVID-19 from the vaccine? (Source: John Hopkins Medicine)**

- You cannot get COVID-19 from the vaccine.
- The COVID-19 vaccines created by Pfizer and Moderna do not have any virus or other infectious material in them. They are designed to cause your body to make copies of a harmless piece of the coronavirus, so you will not get COVID-19 from the vaccine.
- Side effects such as fever and soreness at the injection site have been reported, particularly after the second injection (both of these vaccines require a second injection three to four weeks later), but the reported COVID-19 vaccine side effects in the trials are not as severe or dangerous as having a bad case of COVID-19 illness.

Arizona Department of Health Services (ADHS) recent updates can be found on the COVID-19 Reporting Dashboard.
